

NOTICE

GD (Game Development) – Assignment 03

This notice is issued to inform all students enrolled in the Game Development (GD) module regarding Assignment 03, its versions, allocation method, and submission requirements.

1. Assignment Structure

Assignment 03 consists of five (05) distinct versions. Each student is required to complete only one (01) version, which will be strictly assigned based on the last digit of the student's IT number.

Students must not attempt or submit any version other than the one allocated to them. Failure to follow the assigned version will result in disqualification or allocation of zero (0) marks for the assignment.

2. Version Allocation (Based on Last Digit of IT Number)

DIGIT	TOPIC
Last Digit 0	Silent Ward – Infected Zone
Last Digit 2	Spell Bound
Last Digit 4	Virtual Emergency Response
Last Digit 6	The Lost Sanctuary
Last Digit 8	Orbital Failure

Students are responsible for verifying the last digit of their IT number and ensuring that the correct assignment version is followed.

3. Submission and Demonstration Requirement

Deadline: 18th April 2026

On the above date, students must present and demonstrate a fully completed, functional VR application corresponding to their assigned version. The application must be fully implemented and ready for evaluation.

4. Important Academic Instructions

Assignment documents may include example terms or commands for reference purposes only. Students must create their own original content. Using example terms exactly as provided will result in zero (0) marks for the relevant component.

A one-to-one viva or demonstration session will be conducted to verify originality and technical understanding. Plagiarism or unauthorized reuse of work will be treated as a serious academic offence.

5. General Guidelines

Students must carefully follow instructions in their assigned assignment document only. Late submissions or failure to demonstrate on the specified date will be handled according to module assessment regulations.

6. Clarifications

For any clarifications regarding version allocation, requirements, or evaluation, students should contact the module teaching team well in advance of the deadline.

Thank you,

Good Luck!
